

Designed, Built, Proven & Supported in the **USA**.

Finally, an effective way to keep debris out of your pump! Designed specifically for Challenger series vacuum pumps & blowers in our Traverse City Michigan fabrication plant. This unit incorporates a true cyclonic motion to knock the grit & debris from the airflow. The waste product accumulates in the lower chamber where it is easily removed through a 2" drain or by lifting the cover for access.

GRIT RIDDER CYCLONE

Separates
the grit from
the air for
cleaner airflow
